

Carbon – Made for Eternity

Being ordinary is nothing that you are interested in? You prefer to go your own path and have developed your own style with love for details? Then you might be interested in an individual statement when it comes to choosing your wedding rings. You look out to find a unique piece of jewelry and to feel the pulse of time? Then carbon wedding rings are the exact right thing for you. In this flyer you will find the answer to why this type of ring is especially hip and extraordinary.

Palladium + Carbon

Palladium belongs to the rare platinum metals which often occur in nature as a companion of platinum or gold.

Palladium is outstandingly suitable for jewelry manufacturing because of the facts that its color is shiny and bright and it offers a high wearing comfort due to its lightness in weight.

Perfection – Down to the Finest Detail

No doubt about it, rings are meant to express the connection between you and your partner and should certainly be something very special and individual. However, who ever said that it's not possible to have a perfect design that completely matches your taste and other additional positive features?

This is exactly what our wedding rings made of carbon offer. This mysterious dark material convinces with a high strength on the one hand and resistance and with a distinguishable lightness on the other hand.

Apricot-colored Gold + Carbon

The jewelry manufacturer Bayer characterizes itself with ring designs that have special surface structures. Whether hammer blow optic or matt – structured surfaces are totally in right now and give your wedding rings that eye-catching extra!

All Bayer wedding rings are 100% made in Germany and are manufactured at our location in Pforzheim.

The remarkable strength of carbon is ideal for jewelry which is worn every day. Owning this composition of material, you will have joy with your wedding rings in the long run. Additionally to this, the lightness of this material also ensures a high wearing comfort.

This is a benefit for people that usually do not like to wear rings, or who will be wearing a ring for the first time. The conversion from an unadorned hand to an adorned hand might be made more comfortable with this option of material.

Neat Statements

Stainless Steel + Carbon

More Variety – More Emotion

Wedding rings made of 316L stainless steel, which is also used in the field of medical technology, are very robust and resistive which means that they do not show traces of being worn. The combination of the cool elegance of stainless steel and the plain black of carbon offers its very own fascinating appeal.

One Carbon strand consists of up to 12.000 unique carbon fibers which are wound into the milled immersion of the ring.
